

Web application INFO3305

Report of expenses tracker

Group Al-Khawarizmi

Introduction

This app helps people to keep tracking their expenses, either weekly, monthly or yearly, we desitilize the whole process, the user have to enter the amount spent, type of purchase, date and the application do all the job for them.

Problem Statement

A helpful application would require it to be efficient in logging data, and quick in interpreting it. The system store data and also, its process it and gives a readable and helpful output to the user.

Scope

This application will help to

- Collect
- Categorize
- process spending data

Over a period of time either:

- Weekly
- Monthly
- annually

And Then the data will be displayed and categorize in a way that will make it easier for the user to spot trends and manage their finances

Targeted User

This application is meant for the general public, especially the average citizen that is economically conscious.

Specific Platform

To develop this application, We use database to store and processing the data, and JAVA language and JSP for the computation of the whole processes.

Conclusion

This project is meant to assist users in an economically volatile environment. The application will give the edge to people who would like to keep on top of their spending.
